Maintenance is an essential part of daily life. This is reflected in the economic importance that maintenance has: 400 billion of invested capital, an annual cost of 18 billion, and more than 150,000 workplaces in the Netherlands. In practice, maintenance is often carried out based on empirical approaches and experiences from the past.

Maintenance is a guide to success. Maintenance management software, also known as CMMS software, is a centralized system that enables enterprises to streamline and manage maintenance operations across portfolios. It helps automate asset tracking, effective maintenance scheduling, work order management, and much more from one platform.

Maintenance and repair are important tasks. It is necessary to preserve assets at or repair them to an acceptable working order. Maintenance management is an orderly process to control the maintenance resources and activities required to preserve assets at or repair them to an acceptable working order while you may interpret this definition of maintenance management as simply meaning fixing things that would be an oversimplification.
