background facility based long term care provide a variety of health care services including medication management however medication errors are common and such errors contribute to disability and mortality due to an inadequate number of nurses washington state passed the medication assistant endorsement law allowing certified nursing assistants cnas with specialized training as medication assistants mas to administer certain medications under a register nurse s supervision in assisted living facilities and nursing homes however initial medication assistant training is limited providing continuing education for cnas can address gaps in knowledge and skills needed for safe medication administration and help enhance patient safety furthermore training cnas as mas allocates more time for licensed nurses to perform roles
that require clinical judgment reduces costs and offers additional resources to mas for career advancement purpose the purpose of this project was to develop an education program for certified nursing assistants to improve confidence in knowledge of medication management and skills in safe medication administration at an assisted living facility methods based on research and staff input an educational program was developed and disseminated to nursing assistants through an in person presentation quasi experimental preand post test measured perception and confidence with a survey questionnaire and skills related to safe medication administration via observation of nursing assistants at an assisted living facility in washington state descriptive statistics and thematic analysis were conducted to analyze the data results 12 cnas participated in the study 11 themes were identified in perceptions on barriers to safe medication administration with all participants reporting a lack of understanding in administering different forms of medications as a barrier statistically significant improvement was found in confidence on knowledge of medication management participants also showed increased skills for safe medication administration after education intervention conclusion addressing medication management challenges in assisted living facilities requires collaboration between nurses and certified nursing assistants with continuing education and training a culture of patient safety can be established resulting in improved safe medication administration practices by certified nursing assistants abstract
the opioid crisis in the United States has come about because of excessive use of these drugs for both legal and illicit purposes and unprecedented levels of consequent opioid use disorder (OUD). More than 2 million people in the United States are estimated to have OUD, which is caused by prolonged use of prescription opioids, heroin, or other illicit opioids. OUD is a life-threatening condition associated with a 20-fold greater risk of early death due to overdose, infectious diseases, trauma, and suicide. Mortality related to OUD continues to escalate as this public health crisis gathers momentum across the country. With opioid overdoses killing more than 47,000 people in 2017 in the United States, efforts to date have made no real headway in stemming this crisis in large part because tools that already exist—like evidence-based medications—are not being deployed to maximum impact to
support the dissemination of accurate patient focused information about treatments for addiction and to help provide scientific solutions to the current opioid crisis this report studies the evidence base on medication assisted treatment mat for oud it examines available evidence on the range of parameters and circumstances in which mat can be effectively delivered and identifies additional research needed

treatment and recovery of individuals with opioid use disorder (OUD) can vary; these individuals may have co-occurring disorders, live in diverse parts of the country, and face a variety of socio-economic factors that help or hinder their treatment. All these factors bring complexities to evaluating the effectiveness of services, treatments, and supports. Despite variations, substantial evidence is available to understand the types of services, treatments, and supports that reduce substance use, lessen mental health symptoms, and improve individuals' quality of life. Communities are eager to take advantage of what has been learned to help individuals in need.
